P3 Technologies Releases Most Powerful Addition to the SCAMP Product Line

P3 Technologies is excited to announce its newest addition to the Self-Contained Actuating Magnetic Pump (SCAMP) product line – the Callisto.

Callisto incorporates our fourth generation SCAMP technology for long-life and low power consumption. It features our most powerful solenoid to-date to achieve the highest continuous duty pressure rise yet – more than 3,500 psid.

Its state-of-the-art hybrid valves have demonstrated best-in-class internal leakage and unmatched performance at single-phase liquid, saturated conditions, and two-phase flow making it ideal for cryogenic applications, including propellants or any hazardous fluid.

Callisto joins our other SCAMP products to provide a comprehensive product line ranging from low to high pressure and low to high flow rates for a wide variety of applications including aerospace, medical equipment, cryogenic, and hazardous fluids.

P3 Technologies is a turbomachinery and propulsion company in Jupiter, Florida specializing in propulsion, pumps, and power. The company conducts research, development, design, analysis, manufacture, and test of existing, advanced, and emerging propulsion systems including liquid propellant rocket engines of all cycles and propellants.
